IAACD & IACP GPEC WORKSHOP 2020

Co-hosted by

The Unit of Hope & Dept. of Paediatrics,
St. John’s Medical College Hospital, Bangalore,

Bangalore Medical College
&
Research Institute, Bangalore

Sagar Hospitals, Tilak Nagar, Bangalore

The Association of People with Disability,
Bangalore

January 24th and 25th, 2020

Venue: Cardinal Gracias Hall

**St. John’s Medical College Campus, Sarjapur
Road, Bangalore—560034, India**

ABOUT THE WORKSHOP

One in eight children in 2 to 9 years age group in India has at least one of the nine neurodevelopmental disorders. However, there is a large gap in availability of professional experts to treat neurodisability. The Indian Academy of Cerebral Palsy (IACP) envisions a reduction in this gap through training of professionals in the field.

The recent inclusion of disability awareness in undergraduate curriculum by Medical Council of India also makes it imperative that student training in our country keeps pace with advances in this field, particularly understanding International Classification of Functioning, Disability & Health, Functional Classification Systems and Family Centred Care across neurodevelopmental disorders.

The International Alliance of Academies of Childhood Disability (IAACD) has a global forum called the Global Professional Education Committee (GPEC). The GPEC aims to promote a common global standard of knowledge, training and multi/ inter/ trans-disciplinary practice in the long run. This will help to improve the quality of life and community participation of children and young people with disabilities.

AIMS

- To facilitate faculty training for dissemination of best multidisciplinary practices in childhood disability within the sociocultural framework of our country
- To foster better regional & international partnerships
- Knowledge transfer and training through interaction with the members of GPEC who are leaders in the field of childhood disability from Europe, Canada and USA

SESSIONS

1. Challenges in improving the life of children with developmental impairments in the developing world
2. International Classification of Functioning, Disability and Health and the F words
3. Implementing Family Centred Care
4. Understanding evidence based interventions
5. Functional Classification Systems and Goal Setting
6. Assessment of a child with neurodisability at grass root level
7. Life span approach to developmental disabilities
8. Discussion and drawing the road map to the way forward
